For proper operation, the BKF_CAN_IO display requires the appropriate software to be installed. To ensure compatibility with your car wash software, please provide the BKF store with the software version to be installed onto the BKF_CN_IO display when placing your order.
To read the currently installed software on the car wash displays, log in to the car wash control panel, then go to PLC->Carwash->Carwash 2->BKF-CAN-IO and read the software version from the "Firmware" column and the board version from the "PCB" column.
(Example: A display failure has occurred, e.g., at bay 1. The software version data for bay 1 is unavailable. This data can be read from another station, e.g., bay 2.)
